CT2Yarn: Yarn Level Reconstruction of Crochet from Computed Tomography

Chang Luo, Nobuyuki Umetani

The University of Tokyo

October 2026 · Singapore

Background: What's Crochet?

- Knitting is fabricated as a uniform 2D grid.

Knitting

- **Machine fabricable**, just put multiple hooks.
- Mainly for sweaters, scarfs, hats, etc.

- Crochet is fabricated in 1D line and has more freedom.

Crochet

- **Hand-craft only**, due to the flexibility.
- Mainly for amigurumi, flat patch decoration, etc.¹

Background: Why Computed Tomography?

- CT Scan can see internal structure.

2D Image of Crochet

CT Scanner

CT Volume with slices

- Propose a method to **reconstruct the crochet**.

Crochet

CT Volume Data

Centerline

- If we could reconstruct the yarn geometry structure, then...

- ✓ More **realistic fiber-level rendering** of the crocheted fabrics.

Physics Based Rendering

Physics Simulation

- ✓ **Physics Simulation** with mechanical properties.

- Semantics reconstruction will help...

- ✓ Recover the **unknown pattern**, or **validation** of the made crochet.

Bought crochets from somewhere

<https://www.youtube.com/watch?v=9ThrkgGhBVw>

- ✓ Stich by stich replay of the crochet process as a **teaching tutorial**.

Video Tutorials are hard to follow

Related Work: Knitting Reconstruction [Alexandre+19]

- Recover Knit Instruction from 2D Images.

Limitation: Knitting is very organized

- **2D Image** is too hard for Crochet
- **No Uniform Grid** in Crochet

Capture

2D Image

Machine Knit Instruction

Related Work: Crochet Synthesis [Michal+22]

- Generate text crochet instruction for Closed Mesh.

Limitation: Different Modelling Direction

- This is **Forward Synthesis**
- Designed **only for Amigurumi**

Input

Crochet Graph

```
Segment 0
=====
1: 8sc in a ring [8]
2: 6inc,sc,inc [15]
3: sc,(inc,sc)*2,(sc,inc)*5 [22]
4: sc,inc,2sc,(inc,sc)*2,(2sc,inc)*2,
   (2sc,inc,sc)*2 [29]
5: 2sc,inc,sc,(2sc,inc,3sc,inc)*2,
   2sc,(sc,inc,sc)*3 [37]
....
....
```

Crochet Instruction

Hand-crafted Crochet

Related Work: CT Hair Reconstruction [Shen+23]

- 3D CT Volume Scan $\rightarrow$ Hair strands.

- Crochet is more sensitive to local topology error.

Workflow

- (b) Volume $\mathcal{V}$: size in $H \times W \times D$, intensity value in each voxel.
- (c,d) Oriented Points $\mathcal{P}$ and Center Points $\hat{\mathcal{P}} : (X,Y,Z)$.
- (e) Fragments $\mathcal{F}$: local typology built from center points.
- (f) Centerline $\mathcal{C}$: global typology of the entire crochet yarn.

Method: Direction detection

- Given a 3D CT Volume, want to compute **direction per voxel**.

Method: Gabor in 2D Example

- Gabor kernels could be used to detect directions.

Method: Gabor in 3D

- $K = 32$ directions sampling on a hemi-sphere.
- For each direction calculate the response in Volume $\mathcal{V}$.

Method: Direction detection

- Directions are extracted per voxel.

Method: Centerline Extraction

- Where is the **skeleton (centerline)** of the yarn?
- Mean Shift is an algorithm for clustering.

Method: Centerline Extraction by Mean-Shift

- Mean-Shift push points to their local centers iteratively.

$$x' = \frac{1}{|S_r(x)|} \sum_{x_i \in S_r(x)} x_i$$

Method: Centerline Extraction by Mean-Shift

- Project the shift to perpendicular direction.

$$S_r(x)$$

$$x' = \text{Proj}_{\Pi(x)} \left(\frac{1}{|S_r(x)|} \sum_{x_i \in S_r(x)} x_i \right)$$

Method: Centerline Extraction by Mean-Shift

- Weighting with cosine similarity.

$$w(x_i, x) = \cos^\alpha(x_i, x)$$

$$x' = \text{Proj}_{\Pi(x)} \left(\frac{1}{\left| \sum_{x_i \in S_r(x)} w_i \right|} \sum_{x_i \in S_r(x)} w_i x_i \right)$$

Method: Centerline Extraction by Mean-Shift

- Anisotropic kernel shape!

$$\sigma_{perp} = r \quad \sigma_{tan} = \rho r$$

$$w(x_i, x) = \exp \left[-\frac{1}{2} \left(\frac{\delta_{tan}^2}{\sigma_{tan}^2} + \frac{\delta_{perp}^2}{\sigma_{perp}^2} \right) \right] \cos^\alpha(x_i, x)$$

$$x' = \text{Proj}_{\Pi(x)} \left(\frac{1}{\left| \sum_{x_i \in S_r(x)} w_i \right|} \sum_{x_i \in S_r(x)} w_i x_i \right)$$

Method: Centerline Extraction by Mean-Shift

Naive

+ Projection

+ Projection + Direction

Ours = Projection + Direction + Anisotropic

- **Minimum Spanning Tree** (MST) builds fragments with connection radius given by user.

- **Automatic** and manual tools to build global topology.

Ring

Twig

- Automatic and manual tools to build global topology.

Method: Manual Repairing

- Automatic and manual tools to build global topology.

RGB Reference Photo

Application: Template Fitting

- We can obtain the **semantic stitch pattern**!

Application: Template Fitting

- We can obtain the **semantic stitch pattern**!

Conclusion

- **Human-In-the-Loop** yarn centerline reconstruction.
- **Input:** CT Scan of Crochet
- **Output:** Centerline Curve

- **Future plan:**
 - Annotate more samples as a larger dataset for scaling up to support the machine learning.
 - Finding an optimization method to include the discrete decisions to repair the topology.
